

CyrusOne Donates Data Center Space to the National Center for Missing & Exploited Children

April 9, 2018

CyrusOne donates space at its Northern Virginia and Norwalk, Connecticut Campuses

DALLAS--(BUSINESS WIRE)--Apr. 9, 2018-- CyrusOne (NASDAQ: CONE), a premier global data center REIT, today announced that it has agreed to donate enterprise data center space to the [National Center for Missing & Exploited Children](#) (NCMEC) to assist the non-profit in its mission to help find missing children, reduce child sexual exploitation and prevent child victimization. The data center space is located at CyrusOne's Northern Virginia data center campus and its facility in Norwalk, Connecticut.

"The National Center for Missing & Exploited Children does important work on behalf of children, and we are proud to donate this data center space in order to help them fight the good fight," said Gary Wojtaszek, CEO of CyrusOne. "We hope our donation will take some of the stress of data security and storage off NCMEC's shoulders so they can focus on their mission of returning children safely home to their families."

The Northern Virginia and Norwalk, Connecticut data center campuses are linked to the CyrusOne National Internet Exchange (National IX), which delivers interconnection between other CyrusOne locations across the country. NCMEC will also have direct access to one of the largest fiber hubs in the United States. The space at the Norwalk data center is dedicated to NCMEC's disaster recovery needs.

"Since our inception, we have been committed to helping children in need, and we are pleased that CyrusOne has agreed to help us in this goal by donating much-needed data center space," said Mark Gianturco, CTO and vice president at NCMEC. "We are looking forward to working with them moving forward."

CyrusOne operates 45 [data center facilities](#) across the United States, Europe, and Asia to provide customers with the flexibility and scale to match their specific IT growth needs. CyrusOne facilities are engineered to include the power-density infrastructure required to deliver high availability, including architecture with the highest available [power redundancy \(2N\)](#).
